How are you handling
Cybersecurity Risks?

The NIST Cybersecurity Framework provides a basic and understandable language of five key Functions– Identify, Protect, Detect, Respond, Recover – for managing risk iteratively over time.

IDENTIFY
Develop organizational understanding to manage cybersecurity risk to systems, assets, data, and capabilities.

PROTECT
Develop and implement the appropriate safeguards to ensure delivery of services.

DETECT
Develop and implement the appropriate activities to identify the occurrence of a cybersecurity event.

RESPOND
Develop and implement the appropriate activities to take action regarding a detected cybersecurity event.

RECOVER
Develop and implement the appropriate activities to maintain plans for resilience and to restore any capabilities or services that were impaired due to a cybersecurity event.
